Ship Eggs By Air Route

Hatching Eggs Are Shipped 12,800 Miles From Britain To Australia
An experiment never before attempted, that of sending a sitting of hatching eggs for 12,800 miles by air, has just been carried out in connection with the recent departure of the

Drat air-mail service from Brit'n to Australia, according to a despatch received by Cunard White Star Limited, agents for Imperial Airways Limited.

The eggs were consigned by Captain the Hon. C. K. Greyson (now

On their first stage the eggs were flown from London to Paris. Then came a train link to Brindisi, and after this an air voyage across the

Across India the stages were flown in one of the monoplane airplanes

operated by Indian Trans-Continental Airways, an associated company of Imperial Airways.

The consignment of eggs reached Brisbane 12½ days after leaving London, as compared with a journey

From Brisbane they continued to Sydney by rail, being delivered to Mr. Finney a few days later. He immediately examined the consignment.

This first consignment of hatching eggs by air from England created immense interest in Australia. Photographs of the eggs and of the box

Mr. Finney, the recipient of the eggs, has since communicated with Qantas Empire Airways, and also with Lord Greenway. In one letter, after

promising to report further as to the results actually obtained in the hatching of the eggs, he says: "This experiment has created a 'stir' everywhere throughout Australia, and I feel personally that it will open up and develop the importing and ex-

Care Of House Plants

Watering plants correctly is half the battle in their winter care. Sometimes, if the pots are too full of earth, the water runs off without reaching the roots at all. There should be a space of about half an inch at the top of the pot.

Where it is impossible to remove enough of the top earth, watering should be done by setting the pot in a flat pan of water, so the moisture can rise through the drainage hole in the bottom. Some ferns should always be watered by setting

Cold tap water is usually hard on house plants. Hot water should never be used, excepting in the treat-

ment for worms which requires that the pot be set in about an inch of very hot water. For ordinary purposes, soft water heated to lukewarm stage is best. It causes no shock to the plants and hastens growth a little.

Most wide-leaved house plants require sponging to keep the pores of their leaves open. Oil is fatal to them, but mild soap suds followed by clear lukewarm water will help prevent the harboring of pests.

are of benefit to all house plants, with the exception of a few like the gloxinia, the leaves of which are covered with fine hair. These few types resent the presence of water drops and should be left to themselves. The majority, however, relish

Demand For Horses

Reports Of Serious Horse And Mule Shortage In U.S.

Reports of a 10,000,000 horse and mule shortage in the United States were viewed with interest by the ranchers and dealers of southern Alberta.

Few sales have been made to the United States this year, but the

The eastern market has opened two or three weeks earlier than usual, with prices well above 1934.

Demand is for horses weighing around 1,500 pounds, young, and broken to harness. Prices range from \$125 to \$150 a team.

Saskatchewan Salt Deposits

Most Deposits Are Valuable, But Are Not All Suitable For Use as Road Salts.

Farmers in Deland, Tramping Lake and Bedford districts in Saskatchewan are getting salt from lakes for their cattle but most of the deposits are not suitable for use as road salts. The University of Saskatchewan, in some cases, has been used to analyze the salt deposits. The University of Saskatchewan, in some cases, has been used to analyze the salt deposits. The University of Saskatchewan, in some cases, has been used to analyze the salt deposits.

The university has had a large amount of salt analyzed for its composition and suitability of such salts. The lake deposits in the province consist of a mixture of sodium sulphate (hydrated sodium sulphate) with varying amounts of sodium chloride and sometimes also contain small amounts of calcium sulphate, Dr. V. A. Vigor.

Chamber salt, like common salt, is a mixture and is used to some extent as a medicine and in some patent rock foods. In the absence of common salt in the feed, chamber salt helps to maintain the blood pressure and is used to some extent as a medicine and in some patent rock foods. In the absence of common salt in the feed, chamber salt helps to maintain the blood pressure and is used to some extent as a medicine and in some patent rock foods.

When it comes to fighting a drought, J. P. Macdonald, minister of agriculture, has been asked to make a study of the salt deposits in the province. The University of Saskatchewan, in some cases, has been used to analyze the salt deposits.

Premier Kenneth Stewart, Minister of Agriculture, has been asked to make a study of the salt deposits in the province. The University of Saskatchewan, in some cases, has been used to analyze the salt deposits.

It is estimated that the salt deposits in the province are worth \$10,000,000. The University of Saskatchewan, in some cases, has been used to analyze the salt deposits.

Italy's Electric Railways

Trains Have Top Speed Of 100 Miles An Hour

Italy's electric railways have a top speed of 100 miles an hour, are to start a new era in Italian railway travel.

The Italian State Railways have already ordered six electric aerodynamic trains which will be put into service as soon as the electric line between Rome and Florence and Rome and Naples is completed with a top speed of 100 miles an hour.

These trains will be used only for passenger service and will be the fastest 300 feet long and will comprise three detachable carriages forming a unit. They will be built in Italy and there will be room for about 100 passengers.

Italy occupies the first place in the world in the construction of electric railways. It has the longest electric railway in the world.
